FOR IMMEDIATE RELEASE

National Geographic's Vessel Sailing Globally - including the Arctic and the Antarctic - now with ADVETO type approved ECDIS

Swedish ADVETO has through its distributor GPS Marinkonsult AB in Stockholm secured an order for the state-of-the-art expedition ship "National Geographic Explorer" after an extensive test and evaluation program. This vessel will be the first ADVETO ECDIS equipped vessel sailing on all waters around the world including the demanding waters of the Arctic and the Antarctic.

This new order is a significant example from the ongoing international upgrading program to make ships compliant with the IMO resolution stating that "all passenger-ships in international traffic and over 500 tons should be fitted with a type approved ECDIS latest 2014".

"National Geographic Explorer" formerly MS Midnatsol built 1982 for Hurtigruten. (Photo taken in Stockholm).

"GPS Marinkonsult started to work with ADVETO's navigation products many years ago. I must conclude that according to my opinion ADVETO has the best ECDIS on the market", says Göran P. Sjödin, Founder and CEO of GPS Marinkonsult AB in Stockholm Sweden.

“ECDIS-4000 from ADVETO has features like multi routes, advanced predictors, alternative night presentation and download of PRIMAR charts and chart updates over Internet directly into the ECDIS. This makes ADVETO ECDIS an ideal system for all operations.”

“We are proud that the shipowner Lindblad Expeditions with eleven passenger ships has chosen GPS Marinkonsult and our ECDIS for this upgrading of their “National Geographic Explorer”, says Kent Sylvén, Managing Director of ADVETO. “Even more because of the ship’s global traffic making the chart handling very important. Our electronic order & download ECDIS solution will save time and money for the shipowner”.

ADVETO AB

ADVETO Advanced Technology AB has been in the Electronic Navigation industry since the mid 1980’s. ADVETO systems are used all across the world on all types of ships and by many National Maritime Administrations. Our systems have become increasingly popular on different types of ships and especially with those operating in the confined waters of archipelagos. The majority of our users are still located in Scandinavia but with a rapidly growing number of users around the world.
